

# Titan Electric

## VOA ASSOCIATES INCORPORATED

Titan Electric furnished all the electrical work for VOA's 40,000 square foot build-out at its headquarters on the 14<sup>th</sup> and 15<sup>th</sup> floor of 224 S. Michigan Avenue in Chicago.

VOA, an internationally-recognized architectural design firm, had the primary goal of creating an active and vibrant work environment that celebrates the "charrette" concept through open teaming areas to empower creativity. It also wanted to acknowledge the inspiration of Daniel Burnham with direct views to his lakefront designs.

The Silver LEED-Certified project included the addition of a new connecting staircase between the 14th and 15th floors, unique ceiling and lighting details, as well as extensive custom millwork. The interior and renovation design effort included enhanced training facilities made with eco-friendly and sustainable materials, furnishings, flooring and finishes.

Titan Electric's involvement included two state-of-the-art video conference rooms and the installation of advanced technologies such as the new environmentally-friendly Lutron EcoSystem. This revolutionary computer-controlled system electronically adjusts the lighting levels and shades based on sunlight levels and outside temperature. This maximizes efficiency as well as saving energy.

Reed Construction was the general contractor for the project with architectural services provided by VOA Associates Incorporated.

*POWERING THE FUTURE*
