

Titan Electric

VALSPAR PAINT

Titan Electric completed a truly one-of-a-kind installation for Valspar Paint, one of the world's largest and most trusted paint and coatings manufacturers. Valspar moved its architectural products division to a new three-story, 45,000 square foot showcase facility on the Northwest side of Chicago.

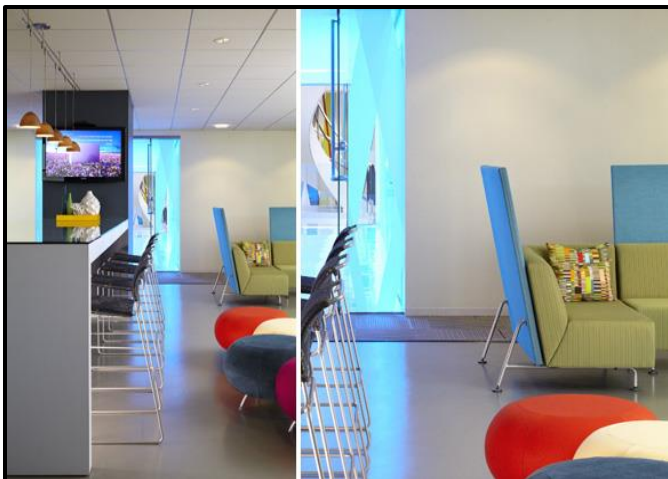

One of the main design objectives was to create infinite color variation throughout the elevator lobby where guests and employees enter the space. Philips Color Kinetics ColorGraze Powercore was specified to wash the space with intensely saturated color changing light. 4-foot linear LED grazing fixtures were placed along the two walls within the lobby. The fixtures were installed in a recessed cove within the drywall ceiling to allow grazing of the full height of the walls on both sides of the elevator.

To create the lighting effects in the space, a set of custom light shows were stored on a Philips Color Kinetics iPlayer 3 DMX Controller. Controller Keypad, a wall-mounted controller accessory, triggers these light shows at the press of a button.

Titan's involvement included:

- Relocation of existing lighting, HVAC and power panels
- Branch lighting, occupancy sensors and wall dimmers
- All furniture locations hard-wired
- Linear pendants fixtures and wall sconces
- Poke-thru floor devices and wire mold
- Security conduit and building fire alarm system
- Telecommunications and audio visual conduit
- Wireless access point conduit systems

Clune Construction was the general contractor for the project with architectural services provided by Whitney Architects.

POWERING THE FUTURE
