

Titan Electric

CISION

Titan Electric was the electrical subcontractor for Cision's new global headquarters located on the 7th floor of One Prudential Plaza in downtown Chicago. After merging with Vocus, another renowned public relations software developer, Stockholm-based Cision now has over 1,500 employees worldwide, with 300 employees based in Chicago.

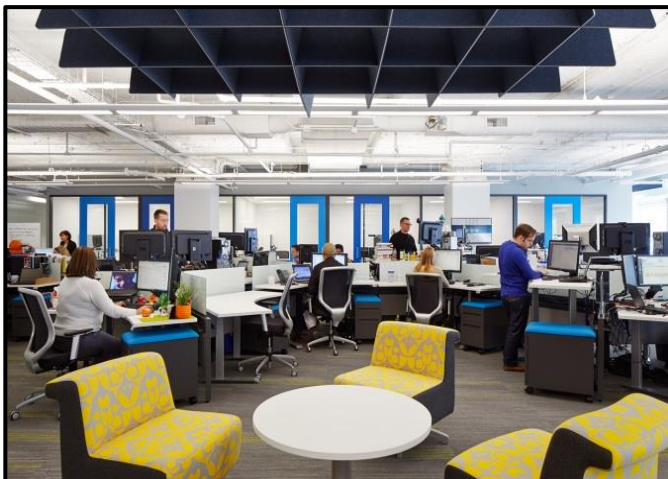

The office's unique open and airy design emphasizes both the company's Swedish roots, and also its culture of open communication.

Reclaimed barn wood can be found in the elevator lobby, reception area and walls throughout. Gathering areas are easily accessible for employees, with a large central kitchen and sizeable town hall space. Moveable partitions, open ceilings, shared workstations, collaborative hubs and glass-door conference rooms allow for creativity and spontaneity. Each workstation features adjustable-height desks and sculpture-like sound treatments to help keep conversation levels at a minimum.

Electrical components of the project included:

- Custom lighting in the lounge and break area
- New light fixtures throughout the space
- Custom LED wall in the reception area
- Custom light fixture in the elevator lobby
- Lighting dimming system in all the conference rooms
- Lutron vacancy sensors in open and private offices
- Power wiring for 335 new work stations
- Cable tray in open office space for low voltage cabling
- Conduit raceways for security, fire alarm and AV

Skender Construction was the general contractor for the project with architectural services provided by Eastlake Studio.

POWERING THE FUTURE
