

Titan Electric

ERS (ENTERPRISE RECOVERY SYSTEMS)

Titan Electric was chosen as the electrical subcontractor for a new 80,000 square foot suburban call center for Enterprise Recovery Systems (ERS), a student loan provider located in Woodridge, IL.

The overall design was a complete shift from ERS's previous facility, allowing for small teams and managers to work collaboratively in an open environment and thus more effectively manage individual client security requirements.

Features of the new building include high, open ceilings, open window lines, indirect lighting, sound masking and color fields. Other features include accommodations for more than 700 employees, 27 private offices, multiple conference rooms and many employee amenities.

Titan Electric's involvement included both high and low voltage electrical components including:

- Extensive AV system featuring TV mounts and monitors, projectors and screens, video conferencing equipment, speakers, microphones, AV cabinets and equipment
- Audio visual cabling including Cat6, Coaxial, HDMI, VGA and speaker
- 40-foot custom chandelier fixture featuring spiral pendants hanging as low as 25 feet from the ceiling
- Custom shade system with one-of-a-kind control panel and exterior lighting to match trellis design near main entrance

Leopardo Construction was the general contractor for the project with architectural services provided by EWP Architects.

POWERING THE FUTURE
