

Titan Electric

EDLEMAN CHICAGO

Edelman, the largest privately held Public Relations firm in the world, chose Titan Electric for a 35,000 square foot renovation at its downtown Chicago location on the 66th floor of the Aon Center.

Completed in just three months, the project included major upgrades to conference rooms, interior meeting spaces, individual offices, and kitchen facilities. Full-height glass panels and doors were installed to provide 180-degree views of Chicago and Lake Michigan.

Moveable partitions were added to allow one quarter of the floor to be re-configured at any time for impromptu meetings, and walls were painted with a writeable surface to facilitate brainstorming and collaboration.

Titan Electric's involvement included the following:

- Relocation and upgrade of existing power panels to handle increased load demands
- 80kva UPS
- Branch lighting and fixtures
- HVAC branch wiring
- Leviton Lighting Control System
- Programmed and building-certified fire alarm system
- Audio visual back boxes and conduit
- Occupancy sensors

Leopardo Construction was the general contractor for the project.

POWERING THE FUTURE
